## QUARTZ / QUARTZON FINISHES

***“The Smooth, Sparkly All-Rounder”***

### What Is Quartz Render?

Quartz surfaces combine coloured cement with **quartz aggregate**, creating a smooth, durable coating that adds sparkle and depth to the water.

### Appearance & Features

- Smooth feel, much softer than pebble
- Bright, vibrant colours
- Uniform appearance with subtle shimmer
- Modern, resort-style look

### Pros

- Comfortable underfoot
- Stronger than marblesheen
- Colour options offer great design flexibility
- Lifespan **15–25 years** with good water balance
- More consistent colour than pebble mixes

### Cons

- More sensitive to bad chemistry
- Can mottle or fade if neglected
- Repairs usually visible due to colour variation
- Costs more than standard pebble but less than tiles
- 

### Chemical Sensitivity

Quartz finishes are cement-based, meaning acidic or highly aggressive water can damage them. Keep LSI stable for maximum lifespan.

### Repair, Upgrade or Replace

- Minor patching is possible
- Most renovations resurface with new quartz or pebblecrete
- Can be fully tiled for a high-end upgrade
- 

### Ideal For

Owners wanting a smoother, more polished look than pebble, without going all the way to tiles.
